

(see identification of Rho antagonist section).

SEQUENCE of (known) Rho antagonist C3 used in the experiments

Nucleotide sequence including part of the plasmid GST sequence. The vector with the GST sequence is commercially available and thus the entire GST sequence including the start was not sequenced. It was desired to determine only the sequence 3 ' to the thrombin cleavage site which releases C3 from the GST sequence. The thrombine cleavage site is shown with an arrow and is located just to the left of the underlined nucleotide sequence below (i.e. the arrow shows the thrombin cleavage site). The underlined sequence shows additional coding sequence translated in our recombinant protein that is not reported in the literature.

Both strands were sequenced to verify that there were no errors in the sequence.

## 5' GTG GCG ACC CTT CCC AAA TCG GAT CTG GTT CCG CGT GGA TCC TCT AGA

Nucleotide sequence of recombinant C3 protein: the sequence given below represents the entire coding sequence for the Rho antagonist used in the experiments mentioned herein. It is similar to the sequence shown above but does not include the GST portion which when the protein is made is enzymatically removed with thrombin.

Amino acid sequence (one letter code)

Translation of the above sequence to show amino acid sequence. Amino acids in bold, highlight differences from published sequence (Popoff et al. (1990) Nucl. Acid. Ress. 18:1291. EMBL accession no. X511464.) The 11 N-terminal sequences are additional; there is a single amino acid change of an alanine (hydrophobic) to glutamic acid (Q).

Number of amino acids: 229

Molecular weight: 25507.5

Theoretical pI: 9.43

## Amino acid composition:

Ala (A) 18 7.9% Arg (R) 6 2.6% Asn (N) 18 7.9% Asp (D) 10 4.4% Cys (C) 1 0.4% Gln (Q) 12 5.2% Glu (E) 10 4.4% 7.0% Gly (G) 16 His (H) 2 0.9% Ile (I) 18 7.9%

Total number of negatively charged residues (Asp + Glu): 20

Total number of positively charged residues (Arg + Lys): 29

Estimated half-life:

The N-terminal of the sequence considered is G (Gly).

The estimated half-life is: 30 hours (mammalian reticulocytes, in vitro).

>20 hours (yeast, in vivo).

>10 hours (Escherichia coli, in vivo).

Instability index:

The instability index (II) is computed to be 26.88

This classifies the protein as stable.

Aliphatic index: 75.07

Grand average of hydropathicity (GRAVY): -0.479
